

Vacuum Type Blasting Machine

Vacuum, or dust free blasting is ideal for spot repairs, and has high demand on the environment which should be dust free and abrasive pollution is prohibited.

The blasting process is happened in a sealed chamber by the brush head, curve or flat. Dust and abrasives are immediately vacuumed by a powerful suction fan. The used abrasives are recycled to the separator and silo, the dust is collector by the cartridge filter. TS machinery vacuum blasting is a safe blasting solution for confined or critical areas (with a lower working speed compared to "open" blasting).

Benefits if using TS vacuum blasting,

- 100% dust free operation because of fully automated vacuum start/stop sequence
- Clean, abrasive free surface after blasting
- Automatic filter cleaning system
- Easy disposal of collected dust in a plastic bag
- Unit can be movable easily
- Wide range of brushes to fit all (flat, cornered, radius) surfaces

Brushes

You can use it by hand,

or mounted on blasting gun rack like this

TS standard model:

Model	Working Efficiency(m ² /h)	Power
TS-150L	8-10m ² /h	4kw
TS-300L	12-15m ² /h	8kw
